Abstract

The article examines the trends and patterns of economic development of the Republic of Bashkortostan before and after the crisis caused by the pandemic of a new coronavirus infection. Presents a rapid forecast of the further development of the Bashkir economy up to next five years. It is shown that in order to achieve an upward trend in the economic growth of the region in the conditions of its specialization in material production, it is necessary to ensure the dynamic stability of the business models of industrial and manufacturing enterprises due to the accumulation of competitive and investment potential by the latter.

Keywords: *economic growth, socio-economic development, industrial production, Republic of Bashkortostan, dynamic stability, investment potential*

The article was prepared within the framework of the state task of the MEI RAS, the topic of research «Institutional transformation of economic security in solving socio-economic problems of sustainable development of the national economy of Russia».
